

GreatDeck Outdoor Plastic Deck Tile Maintenance

GreatDeck decking products are durable and designed to withstand the outdoors year round. Nevertheless, they still require minimal and easy care. We highly recommend cleaning your flooring once or twice a year to improve longevity, cleanliness, aesthetics but more importantly, efficient water flow.

Follow these procedures to clean your GreatDeck Outdoor Plastic Deck Tile:

Vacuum underneath and on top of each tile.

Tiles should be cleaned individually instead of removing them all. This ensures the leveling material is left intact and does not shift dramatically. Vacuum the surface and the tile itself.

Remove any debris caught between slats of the tile.

By using any tool such as a screwdriver or chisel to access these spaces, it is simple to dislodge anything that may get caught between the slats without lifting the tile.

Using an aggressive brush or hard bristled broom; wash the tile surface with an all-purpose cleaner and hot water. For stubborn stains such as grease drippings from a BBQ, the manufacturer recommends using orange glow cleaner

NOTE: It is important you scrub WITH the embossed grain on the surface of the tile to thoroughly clean dirt and grime that settles in the wood grain textured surface.

Power Washing - This is not necessary but should be considered in the event that your area is commonly exposed to damp conditions that collect fungus. You may experience issues with water drainage if water is left to accumulate on the surface.
