

Goldshield Long-Term Antimicrobial GS 75 Product Directions

SKU: 403-GS75

Follow these steps to apply Goldshield's GS75: wash, dry, and apply.

Wash the surface first. GS75 is not a detergent; it's an antimicrobial, so already contaminated surfaces should be thoroughly washed with any detergent that meets your cleaning standards.

Rinse all surfaces with water to rid the surface of residual detergent trace amounts.

Dry all surfaces well. This is a very important step. GS75 will not bond properly to a wet surface. If the areas to be covered are large, an atomizer or electrostatic power sprayer can be used to apply GS75.

Apply GS75 using the trigger sprayer that comes with the bottle. Do not spray Goldshield on a cleaning cloth; apply directly from the bottle onto the surface. Spray all dry surfaces with a fluid back and forth motion 6 to 8 inches from surface until the entire area to be treated has been lightly covered. No need to oversaturate, a light film is all that is necessary.

Allow GS75 to dry for 2-3 minutes and wipe away any remaining moisture with a dry cloth such as microfiber cloths.

Treated surfaces will be protected from microbial build up for up to 90 days. Goldshield GS75 provides instant-acting, long-lasting protection.
