**Report No. :** TEC006462P  
**Date :** June 30, 2010  
**Subject :** Volatile Analysis of Rubber Matting

Dear Mr. Mattson:

A sample of rubber matting was submitted for analysis. The material, identified as Sample 1 in this report, was a speckled blue color on one side and was approximately 1/2 in. thick. No other information regarding the background or history of the sample was provided. The purpose of this analysis was to identify the volatile organic compound (VOC) content of the material per EPA Method 24.

The sample was tested for volatile content and on a subcontract basis by an accredited laboratory. A summary of the VOC content for the sample is shown in the table below. A review of the results indicate that the volatile content of the material was less than the detection limit of 1% for this analysis.

**EPA 24 Test Results**

<b>Sample</b>	<b>VOC Content</b>
1	<1.0%

Respectfully submitted,
