

### Max Tile Modular Flooring System Installation

#### Materials Needed:

Box cutter or utility knife, spare blades, lubricant for blades (WD-40) table saw or jig saw

Allow all flooring materials to acclimate to the room for 24-48 hours

Installing snap together floor tiles is a simple procedure that almost anyone can do. Follow these simple instructions to lay your new flooring like a professional. Since no adhesives are required, this installation should be relatively quick and easy. For wall-to-wall installations of snap together flooring, you may discover that you need to cut your tiles to fit. If you find that to be the case, we recommend that you use a table saw. We also suggest that you keep a lubricating spray oil on hand to use on your blade. This will keep it from getting hot and melting the plastic tray of your tiles. You will want to be sure to spray directly on the blade and not on the tiles.

**Step 1** The panels have 2 sides with female loops, and 2 sides with male pegs:

**Step 2** Start by laying your first panel in any corner (male edges required) or garage opening (female edges required) roughly 1" from the wall. The loops should be pointed in the direction you want to add panels:

## Max Tile Modular Flooring System Installation continued

**Step 3** Place the next panel so that the pegs line up over the loops:

**Step 4** Gently step on each panel. You will hear and feel it snap into place. Repeat these steps until your flooring is complete. That's all there is to it!

All tiles on any given installation should ALWAYS HAVE THE FEMALE LOOPS GOING IN THE SAME DIRECTION.
